clout

BRAND GUIDE · VERSION 1.0 · OCTOBER 2026

Seek the best content, win SKR

Clout is a meme market for people with good taste. Swipe short videos, back your favorites with SKR, and see whether your picks catch on. Creators earn trading fees on their videos. Built for Solana Seeker, with verified Seeker benefits.

VOICE

Talk like a friend who is always first to the joke. Short sentences, lowercase energy, zero finance jargon. Celebrate wins loudly, shrug off losses. Never promise returns.

SAY

back it, called it, seek the best, heating up, made for Seeker

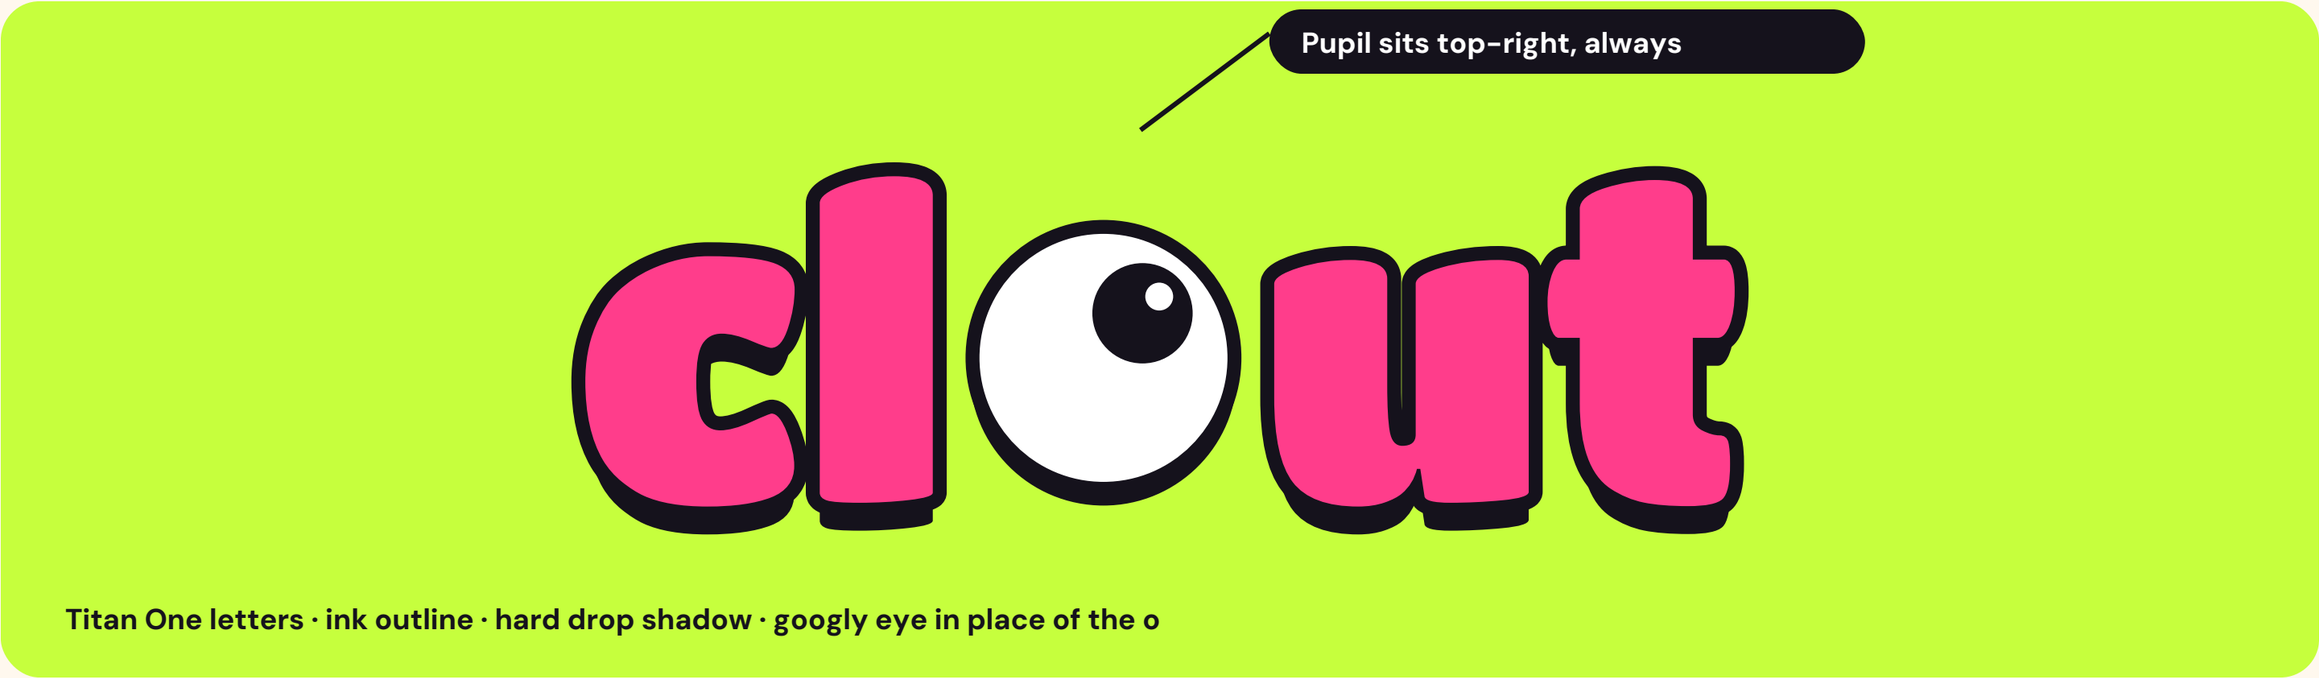

AVOID

invest, position, guaranteed, moon, financial advice

THE LOGO

The eye is the "o".

The wordmark is "clout" set in Titan One, with a googly eye replacing the letter o. The eye always looks up and to the right, toward what is about to blow up. It is the whole brand in one glyph.

COLORWAYS

Four versions, one logo.

F1 · Lime

Pink letters, ink outline and drop. The hero. Social posts, stickers, the pitch.

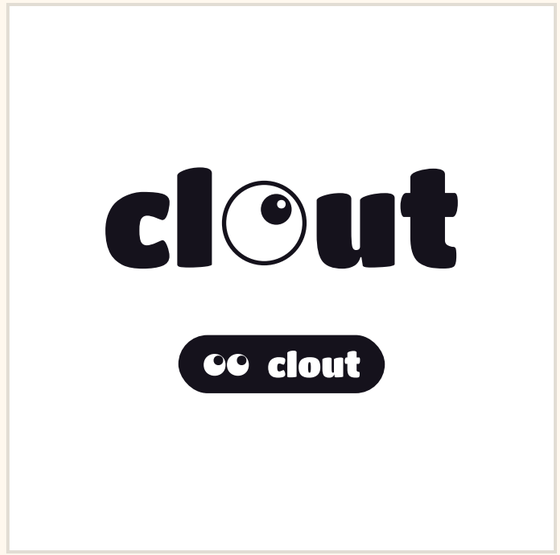

F2 · Pink

White letters, ink outline and drop. App splash, merch, anything loud.

F3 · Night

Cream letters, pink drop shadow, no outline. Dark mode and dark screens.

F4 · Mono

Ink letters, no effects. Docs, legal, one-color printing.

For headers and small spaces.

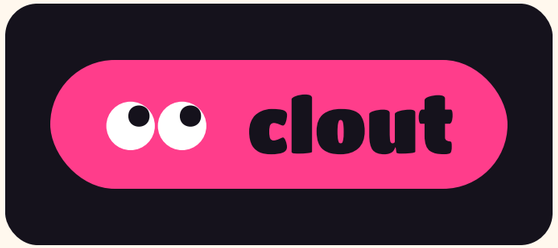

Light lockup: pink tile + pink wordmark on cream.

Dark lockup: lime tile + cream wordmark on ink.

The pill (two eyes + "clout") is the compact logo for app top bars, buttons and badges. Pick the pill that matches the screen's colorway.

APP ICON

Minimal. Just the eye.

The icon drops the outline, drop shadow and lettering. It is the googly eye on a solid tile with corners at 23% of the tile size. Pink is the primary icon. Submit the square, unrounded file to app stores and let the OS mask it.

AT REAL SIZES

CLEAR SPACE AND SIZE

Give it room.

Clear space on every side = the height of the eye.

MINIMUM SIZES

clout

Wordmark: 80 px wide on screen, 20 mm in print.

Icon: 24 px. Below that, use the eye alone.

clout

Pill: 32 px tall.

MISUSE

Don't do this.

Don't mirror the eye. It always looks up-right.

Don't recolor the eye or the pupil.

Don't use a plain "o". The eye is the logo.

Don't stretch or squash the wordmark.

Don't add outlines, badges or shadows to the app icon.

COLOR

Loud, but on purpose.

Pink

#FF3D8B
RGB 255 61 139

Primary. Buttons, wordmark, icon.

Lime

#C6FF3D
RGB 198 255 61

Secondary. Highlights, price up.

Ink

#15121C
RGB 21 18 28

Text, outlines, dark surfaces.

Cream

#FFF8EE
RGB 255 248 238

Light surfaces.

Yellow #FFD23F
Wins, rewards

Orange #FF7A2F
Trending, price down + arrow

Sky #3DB8FF
Info

Purple #2B0B5E
Badges

Small text on pink or lime is always ink. White on pink only at 24 px and up, or with the ink outline.

TYPOGRAPHY

Two fonts. That's it.

DISPLAY

Titan One

Aa Bb Cc 0123456789

Logo, headlines, numbers and button labels: anything that should feel like a sticker. Never for long text.

BODY

DM Sans

Aa Bb Cc 0123456789

Everything you read: descriptions, captions, settings, legal. Regular 400 for body, SemiBold 600 for labels.

Scale: display 72/48/32 px · numerals 28 px · body 16/24 · label 14 · caption 12

SHAPE AND UI

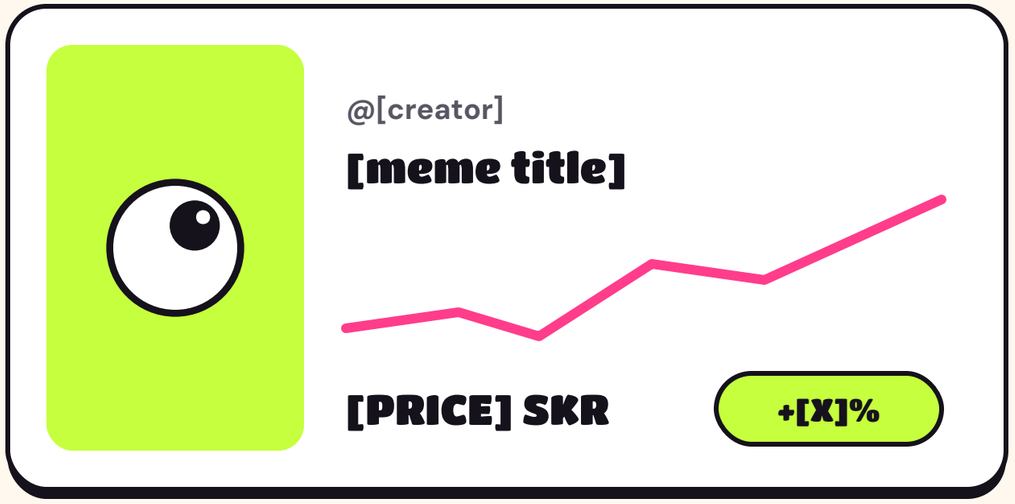

Round, chunky, sticker shadows.

back it

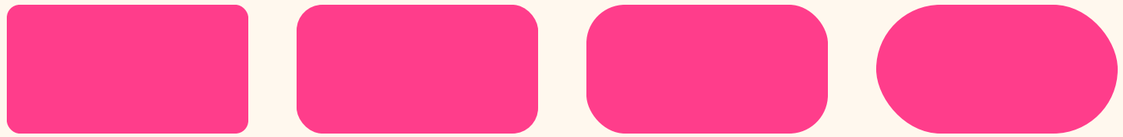

called it

sell

Buttons are pills with a 3 px ink border and a hard 6 px drop. Pressed: they sink onto the shadow.

RADIUS

sm 8 md 16 lg 24 pill

DEPTH

Hard shadows only: a solid ink offset, never a blur. On dark screens the drop is pink. Motion is bouncy and short, under 300 ms, and the eye can glance around while loading.

THE KIT

What's in the zip.

1-wordmark	The four wordmarks (F1–F4), transparent and on background. SVG + PNG.
2-logo-boards	The exact F1–F5 boards: wordmark + pill, and the header lockups.
3-header-pill	The compact two-eyes pill in each colorway.
4-lockups	Icon + wordmark, light and dark, with and without background.
5-app-icon	Minimal icons, rounded and square, 32 to 1024 px.
6-favicon	favicon.ico, favicon.svg, apple-touch-icon and PWA sizes.
7-eye	The googly eye alone, for loaders, reactions and stickers.
8-fonts	Titan One and DM Sans with their Open Font Licenses.
9-tokens	tokens.json, CSS variables, Tailwind and React Native themes.

All lettering in the SVG files is converted to outlines, so the logo renders exactly the same without the font installed.
